### Public Health Department, Town Hall,

LUTON.

February, 1951.

His Worship the Mayor, Aldermen and Councillors of the Borough of Luton.

Ladies and Gentlemen,

In presenting the report for the year 1950 I feel it would be your wish that I should make a brief comment on the health services of Luton, and in addition, amplify a few more of the more important statistical data contained in the body of the report. I should like, therefore, to draw attention to the infant mortality rate which is one of our most valuable indices of community health. During 1950, 38 infants died before reaching the age of 1 year giving an infant mortality rate of 22 per 1,000 live births. The lowest infant mortality rate previously recorded in Luton was 26 per 1,000 in 1949. A more detailed examination of the rate for 1950 reveals that the decline in infant mortality since 1949 is due to a marked fall in the number of deaths of infants under four weeks of age. The death rate for infants under four weeks of age has hitherto been less subject to change than that of the four weeks to twelve months group, and the neo-natal death rate of 12.07 for 1950 is consequently also the lowest ever recorded in the Borough. On the other hand, however, it should also be noted that the stillbirth rate of 26.3 per 1,000 total births compares unfavourably with the provisional figure of 22.6 for the whole of England and Wales.

The steady increase of the town's population has been maintained during 1950. The Registrar-General's mid-year estimate of 110,000 shows an increase of 760 over the previous year.

The birth rate, on the other hand, has continued to fall, the rate of 15.8 being the lowest since 1941. The total number of registered births was 1,786 and of this number 1,149 (64%) took place in hospital. The system of admission of cases to maternity units of the Luton and Hitchin Group Hospital Management Committee is on a selection basis. All first pregnancies and fifth and subsequent pregnancies are normally admitted to hospital, as also are the second, third and fourth pregnancies which present some complication. In addition are admitted those cases which would normally be confined at home, but which, on account of adverse home circumstances, are recommended for admission by the health department. This system of selection works well and helps to explain the fall in hospital confinements

in 1950 as compared with 1947 when approximately 75% of total confinements occurred in hospital. One would have thought, however, that as a result of this process of selection there might have been a fall in the stillbirth rate, but this objective has not so far been achieved.

Poliomyelitis once again became epidemic in England and Wales during 1950, and in Luton there were 15 confirmed cases, 10 of which occurred in the 5-15 age group. Two cases were under 5 years of age and the remaining three were between 25-45 years of age. The first Luton case was notified on April 13th, two more occurred on May 8th and a fourth on June 10th. In anticipation of a large number of cases in the late summer and autumn it was decided to suspend diphtheria immunisation sessions during August, September and October. General practitioners were accordingly notified of the intention and their co-operation was secured. Immunisation clinics were reopened on November 1st and functioned normally until the end of the year, but it will be noted that there has been a decrease in the total number of children immunised in 1950 as compared with 1949. In this connection it is worthy of note that for the second year in succession no case of diphtheria was notified, although one child normally resident in Luton developed the disease whilst residing outside the Borough. This freedom from diphtheria in two consecutive years should not be allowed to give rise to complacency. It is as essential now, as it has been in the past, for parents to ensure that their children are immunised against diphtheria just before their first birthday and that a reinforcing injection is given at the time of school entry when their children have attained the age of 5 years.

During 1950 there was an increase in the number of notifications of respiratory tuberculosis. This increase can be attributed to the visit of the miniature mass radiography unit during March. It has not been possible to ascertain the exact number by age and sex of Luton residents who were X-rayed at this time. We can say, however, that of those who were referred by the mass radiography unit to the Luton Chest Clinic, 71 were subsequently notified as suffering from respiratory tuberculosis. The number of deaths from respiratory tuberculosis on the other hand, is less than half that of 1949 and the mortality rate of 0.2 per 1,000 population is the lowest ever recorded for Luton. The lowest rate previously recorded was 0.4 per 1,000 population in 1938. It would be unreasonable to expect this low record mortality rate to be maintained in subsequent years—indeed, the unusually low mortality figure for 1950 may even be fortuitous—but it should be noted that provisional figures for England and Wales, issued by the Ministry

of Health for the first half of 1950, also show a marked fall in the number of deaths from respiratory tuberculosis.

During the year 1,069 cases of measles and 613 cases of whooping cough were notified. Six cases of measles and 34 cases of whooping cough were admitted to the Infectious Diseases Hospital. There was no death as a result of either of these infectious diseases during the year.

Only three cases of dysentery were notified although serious outbreaks were reported in other parts of the country during 1950. Four cases of food poisoning were notified and the infection was due to a salmonella organism in each case.

The personal health services which are administered through the Divisional Health Committee have continued to function smoothly. The domestic help service has proved a valuable adjunct to the domiciliary midwifery and home nursing services, and from experience gained in 1949 it was decided to fix the establishment of the domestic help service at an equivalent of 45 full-time home helps. A degree of flexibility is provided, however, by maintaining a nucleus of 25 full-time home helps and employing a variable number of part-time workers.

In July, two of the three Day Nurseries were provisionally recognised by the Ministry of Health as suitable for the training of students for the Certificate of the National Nursery Examination Board. Practical training in the care and development of the young child is given at the nurseries, and arrangements have been made with the Luton Divisional Executive for Education for six nursery students to attend a course of further education in vocational and general subjects at the North Bedfordshire College. The course of training covers a period of two years, and instruction is given in English literature, music, health and hygiene, needlework, self-expression, etc.

Towards the end of the year arrangements were in hand for providing in 1951 accommodation for infant welfare sessions on the new housing estate at Farley Hill. These sessions will be held in a temporary structure of the Nissen type which has been taken over by the Tenants' Association as a Community Centre. This is certainly a far cry from the health centre which was envisaged three years ago, and it is a matter for regret that economic necessity has delayed the construction of a permanent building where health and welfare services could function efficiently.

Considerable anxiety is felt at the present time regarding the increasing

difficulty that is being experienced in recruiting new staff to replace those who have resigned to take up new appointments. In December, Dr. William Edgar, who had been Assistant Medical Officer for two years, resigned his appointment. Advertisement of the vacancy failed to bring forward any male applicants.

Recruitment of district sanitary inspectors has also become more difficult and, in consequence, those members of the staff who remain have had to take on additional duties. I wish, therefore, to place on record my gratitude to the entire staff of the department who without exception have worked hard to maintain the efficiency of the service. I should like also, to thank my colleagues in other departments for the advice and assistance they have given me in an effort to solve my staffing problems.

Finally, I should like to thank the members of the Council, the Chairman and members of the Health Committee, who by their patience and understanding have made easier the tasks of my first year of office.

I have the honour to be,

Your obedient servant,

R. M. DYKES,

Medical Officer of Health.

#### **TUBERCULOSIS**

Whilst there has been an increase of 36 notifications of pulmonary tuberculosis over the previous year, the number of deaths from this disease has been halved.

PARTICULARS OF NEW CASES OF TUBERCULOSIS AND ALL DEATHS FROM THE DISEASE DURING 1950

	N	ew Cases		Deaths			
Age Periods	Pulmonar M. F	y Pulm	onary F.	Pulm M.	onary F.	No Pulmo M.	on- onary F.

### NURSING HOMES REGISTRATION, Public Health Act, 1936

Name of Nursing	Date of Registra-	DIVISION OF BEDS				
Home	Borough Council	Maternity	Surgical	Medical	Total	
Westdale	1.7.36	5	-		5	
The Chase	3.4.46	10			10	
Inglewood	8.2.50	4			4	
Totals		19	-	-	19	

During the year 3 women were delivered in the Westdale Nursing Home, 153 in the Chase Nursing Home, and 31 in the Inglewood Nursing Home.

## NATIONAL ASSISTANCE ACT, 1948

Two persons who were unable to devote to themselves and who were not receiving from other persons proper care and attention were ascertained by the department. Both were removed to a suitable hospital without having recourse to the powers provided under section 47 of the National Assistance Act, 1948.

## DIVISIONAL HEALTH SERVICES

NATIONAL HEALTH SERVICE ACT, 1946

#### SECTION 22—CARE OF MOTHERS AND YOUNG CHILDREN

#### (a) Provision of Clinics and Centres

There was a decrease in the number of attendances at the Infant Welfare Centres as compared with 1949. One additional clinic was opened at St. Anne's Church in October to provide facilities for the residents in the Crawley Green Road/Ashcroft Road area, and there was an average of 44 attendances at each session during the first three months.

# NUMBER OF CONSULTATIONS, WEIGHINGS, ETC., AT INFANT WELFARE CENTRES, DURING THE YEAR 1950

	Number		Attend	dances		Medical	Officer's	
:	of Sessions	0-1	years	1-5 y	1-5 years		Consultations	
	003310113	1st	Sub.	1st	Sub.	Under 1 year	1-5 years	
Dallow Road Stopsley Leagrave High St. Leagrave Marsh	48 51 49	207 86 66	2,680 1,343 980	9 16 7	629 336 274	607 276 50	221 122 16	
Road Round Green Castle Street Beechwood Limbury St. Anne's	51 94 104 100 102 12	107 255 272 235 175 20	2,114 4,354 4,418 3,738 3,135 394	10 13 21 46 10 4	559 1,014 902 1,028 747 107	409 930 574 628 517 91	113 342 177 181 215 44	
	611	1,423	23,156	136	5,596	4,082	1,431	

The number of children attending the Infant Welfare Centres for the first time expressed as a percentage of the number of births registered during each of the last five years was as follows:—-

1946	• • •	• • •	• • •	85.3	per	cent.
1947	• • •	• • •	• • •	85.7	,,	,,
1948	• • •	• • •	• • •	85.9	,,	,,
1949	• • •		• • •	89.0	22	22
1950	• • •			82.5		,,

### (b) Premature Infants

A premature infant is defined as one weighing less than  $5\frac{1}{2}$  lbs. at birth. The term includes, therefore, somewhat small, but healthy babies who require little more than ordinary care and management, and, on the other hand, infants who are so small that they have little chance of surviving however much care they are given.

Between these extremes are infants who, with expert attention, have a good chance of becoming healthy, vigorous babies, but who would probably not survive the ordinary rigours of early life which the normal baby meets without harm.

Special arrangements for the care of premature infants in their homes are made within the midwifery service, and infants who cannot be cared for at home are admitted to hospital.

Premature births which were notified during the year are analysed below according to place of birth, and birthweight.

## PREMATURE INFANTS CLASSIFIED ACCORDING TO BIRTH WEIGHT

	Under 2 lbs.	2-3 lbs.	3-4 lbs.	4-5 lbs.	5-5½ lbs.	Weight not Re- corded	All

### (c) Contraceptive Clinic

All patients are referred to the contraceptive clinic by a medical practitioner.

Thirty-six sessions were held during the year and there were 178 new patients. Subsequent attendances amounted to 473.

(d) Orthopaedic and Ophthalmic Clinics

Children under the age of five years requiring Orthopaedic or Ophthal-mic treatment are referred to the ordinary school clinic sessions.

The figures for 1950 show a slight decrease compared with those for 1949.

### SECTION 23—MIDWIFERY

#### Midwifery Service

The establishment for this service provides for a Supervisor of Midwives and eight domiciliary midwives. There was a marked increase in the number of domiciliary confinements over previous years which was due in part to the regrouping of the Maternity Hospital accommodation and in part to a decrease in nursing home confinements. For some years the establishment had been deficient of one midwife, but during the year it was necessary, not only to fill this vacancy, but also to increase the establishment from eight to nine midwives. No additional appointment, however, had been made by the end of the year.

The following table shows the work of the domiciliary midwives during the year. For comparative purposes, the figures for 1949 are shown

Number of Confinements.

Luton is recognised as a training school for Part II midwives, and during the year 28 pupil midwives undertook their domiciliary training as required by the Central Midwives Board.

#### Medical Aid.

During the year medical aid was sought in 55 of the midwives' cases.

### SECTION 24—HEALTH VISITING

The establishment provides for one superintendent health visitor and ten health visitors. The strength during the year, however, was one superintendent health visitor, six full-time health visitors and one part-time health visitor. It was accordingly necessary to relieve health visitors of their duties in connection with school medical inspections and this part of their work was undertaken by State Registered nurses.

## NATIONAL SOCIETY FOR THE PREVENTION OF CRUELTY TO CHILDREN

During the year 1950 the Inspectors were responsible for dealing with 28 cases on behalf of the Department.

## SECTION 25—HOME NURSING SERVICES

The Division is divided into eight districts for home nursing purposes. One nurse is allocated to each district and a relief nurse is also employed. One nurse resigned in October and it was not possible to fill the vacancy by the end of the year.

Cases are referred direct to the district nurses by hospitals, general practitioners, etc., and the nurses work under the direction of the family doctor. Nursing requisites and sick room equipment for patients nursed at home are provided through the Home Comforts Depot of the St. John Ambulance Brigade, and during the year 1,003 articles were loaned out, an increase of 200 over 1949.

## SECTION 26—VACCINATION AND IMMUNISATION

#### Vaccination.

Vaccination in the normal way is carried out entirely by the family doctor. The figures for 1950 show an increase of 123 in respect of primary vaccinations and 88 for re-vaccination.

	Under 1 year	1-4 years	5-14 years	15 years and over	Total
Primary vaccination	269	61	66	138	534
Re-vaccination	-	1	23	172	196
Totals	269	62	89	310	730

### Immunisation.

Children are immunised either at immunisation clinics or by arrangement with private practitioners. There was a decrease of 547 immunisations as compared with 1949. This was due to a temporary suspension of immunisations during the months of August, September and October.

Number of clinics held	• • •	12

(b) Number of cases included in (a) in which the child is known to have completed the course of immunisation not less than 12 weeks before the onset of the disease	0	
(c) Number of deaths from diphtheria registered in the Authority's area during the year, of children under 15 years of age	0	
(d) Number of deaths included in (c) in which the child is known to have completed the course of immunisation not less than 12 weeks before the onset of the disease	0	

# SECTION 28—PREVENTION OF ILLNESS, CARE AND AFTER-CARE

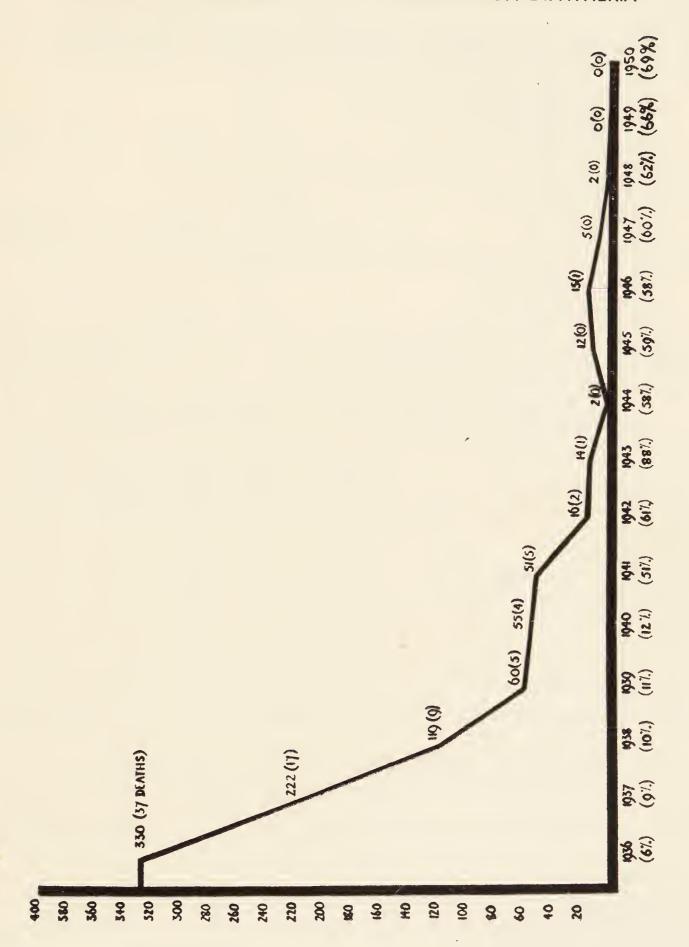

The Divisional Health Committee's functions in this connection have been limited to arranging convalescent facilities for mothers and young children. Arrangements are made through the Invalid Children's Aid Association and during the year two children were sent for convalescence.

#### SECTION 29—DOMESTIC HELP SERVICE

The demands made upon the Domestic Help Service continue to be heavy. Although during 1950 fewer home helps were employed than during 1949, more householders received assistance, and the number of hours of assistance provided increased from 74,929 in 1949 to 81,483 in 1950.

## DIPHTHERIA IMMUNISATION

GRAPH SHOWING PERCENTAGE OF IMMUNISED POPULATION 0-15 YEARS
TOGETHER WITH INCIDENCE, AND DEATHS FROM DIPHTHERIA

There is an ever-increasing demand from old people and chronic sick who require assistance for an indefinite period often lasting many months. Every effort, however, is made to meet their needs.

## REPORT

OF THE

# Chief Sanitary Inspector

Public Health Department,

Town Hall,

LUTON.

February, 1951.

His Worship the Mayor, Aldermen and Councillors of the Borough of Luton.

Ladies and Gentlemen,

The maintenance of good sanitary conditions throughout the town depends very largely on the efficiency of the routine work of the staff of the department, and, with the exception of those circumstances where a marked improvement has been noted or where changes are considered desirable, there are very few matters which call for special mention.

One of the services which has always been regarded as of primary importance is meat inspection. It ensures not only that no diseased meat leaves the slaughterhouse, but also that the greatest amount of sound meat is saved. The full efficiency of this service has necessitated nearly 1,000 hours of overtime duty by sanitary inspectors during the year. In January, seventeen applications for the renewal of slaughterhouse licences were submitted to the Council, who, after careful consideration of a detailed report on each of the premises, decided that only two licences could be granted. The unsuitability of the slaughterhouses in the town was clearly demonstrated when the Council refused to grant a licence to one of the three existing slaughterhouses all of which were, at that time, being used to their full capacity. This decision of the Council was, on appeal, upheld in the Magistrates' Court. Towards the end of the year the Council made representation to the Ministry of Food to be allowed to provide a public abattoir and it is pleasing to report that the Minister agreed to the preparation of a scheme for Luton. There is unquestionably an urgent need in the town for better facilities for the slaughter of animals and the transport of meat. When an abattoir is provided and all meat vans are fitted with hanging rails, the risk of contamination of meat will be considerably reduced.

During the year frequent visits have been made to all premises where food is prepared or handled. One specialist inspector responsible for food hygiene regularly visits all restaurants, cafes, factory canteens and school meals canteens, and advises their staffs on food hygiene. In June a Clean Food Exhibition was held. This exhibition demonstrated the dangers of lack of care in the handling of food, and introduced to food traders and the general public the new food byelaws which have been adopted by the Council.

Approximately 97.5% of the milk consumed in the Borough is heat-treated milk, i.e., it is either pasteurised or sterilised. A half of one per cent. is designated raw milk, i.e., tuberculin tested milk, and the remaining 2% is undesignated raw milk. Samples taken throughout the year of undesignated raw milk have failed to reveal the presence of Tubercle Bacilli. Four hundred and thirty-one samples of heat-treated milk were taken to test the efficiency of the heating process. Twenty-two (5%) of the samples failed the test and in these cases the pasteurising plants were examined and the defects in their mechanism quickly remedied.

For many years considerable anxiety has been expressed by the inhabitants of certain areas in the town regarding the amount of atmospheric pollution caused by fumes and smoke from industrial chimneys. Accordingly, on April 1st, deposit gauges, lead peroxide instruments and a smoke filter were installed at two points in the town, and it is hoped that the information gained from them will be of material assistance in our efforts to obtain a solution to the smoke problems in Luton.

During the year 373 new houses were built by the Corporation and an additional 52 were built under private licence. On the debit side, however, 15 houses were demolished or part closed and 16 families had to be rehoused as a result of this action. For some time it has been felt that more could be done to improve the bad conditions of many of the older houses, and it was with this in mind that the Council recently gave consideration to a proposed survey of older property. Unfortunately the recruitment of new sanitary inspectors to replace those who have resigned to take other appointments has become increasingly difficult, but it is hoped, nevertheless, that it will be possible to undertake this survey in 1951.

In conclusion, I should like to express my gratitude to the Chairman and members of the Public Health Committee, the Medical Officer of Health and Officers of the Corporation for their advice and friendly cooperation. I should also like to thank my Deputy and District Inspectors and Staff for their ready and loyal assistance throughout the year.

I have the honour to be,

Your obedient servant,

G. F. MACEFIELD,

Chief Sanitary Inspector.

# SANITARY CIRCUMSTANCES OF THE AREA

## GENERAL.

Luton which has an area of 8,736 acres, is situated in a valley between the Chiltern Hills at 200 to 400 feet above sea level in the town, rising to 400 to 600 feet above sea level on the surrounding hills. It is mainly built upon the upper chalk, with loam and clay deposits.

Meteorology.—The Luton Meteorological Station, which is under the control of the Borough Engineer, is situated in Wardown Park, New

Bedford Road, from which the following observations were taken :-

Sunshine.—1,170.3 hours of sunshine were recorded during the year, the sunniest day being 29th June, 1950, when 14.4 hours were recorded.

Rainfall.—The total rainfall recorded during the year was 27.40 inches the wettest day being 3rd July, 1950, when 1.41 inches of rain were recorded.

Temperatures.—The maximum temperature during the year was 87° F., recorded on 7th June, 1950, and the minimum temperature was 22° F., recorded on 28th October and 5th, 6th, 15th and 21st December, 1950. The mean temperature for the year was 48.70° F.

Wind.—The prevailing wind during the year was West.

# WATER SUPPLY.

Luton has an abundant supply of excellent water which is distributed throughout the Borough by the Luton Water Company, and is derived from deep wells in the chalk situated in Crescent Road and Runley Wood. Chlorination of the supply is carried out, the average amount of chlorine

pumped into the supply being 0.25 parts per million.

From information received from the Luton Water Company, the total amount of water, supplied during the year ended 31st December, 1950, was 1,664,381,490 gallons. Assuming a population of 110,000 the total number of gallons used per head per day was approximately 41, an average of 18 gallons per head per day for industrial purposes, and 23 gallons per head per day for domestic use.

The following information, concerning the plumbo-solvency of the

water, is supplied by the Luton Water Company:

"We are informed by the Water Pollution Research Laboratory that the water supplied from our chalk wells at Crescent Road is slightly plumbosolvent. Tests were carried out on a length of unused lead pipe and it was found that although the percentage of lead dissolved in the water was relatively small this quantity was not reduced over a period of 14 days by any insoluble coating being formed on the inside of the pipe. In these circumstances although the quantity of lead dissolved in the water is small we are advised by the Water Pollution Research Laboratory not to use lead pipe for drinking water services. Plumbo-solvency is not usually associated with waters as hard as that supplied by this Company, but we understand that the percentage of carbon dioxide in the water is rather higher than normal which accounts for this exceptional case.

"In the past no lead service pipes have been fitted in the Borough, at any rate during the present century, and instructions to plumbers carrying out work in the area of supply have always insisted on the use of steam quality galvanised tube for all water services. However, short lengths of lead pipe connecting the galvanised pipe to wash basins or to water closet cisterns have been permitted, and it is considered that the use of such short lengths

is not a source of danger. This practice is still continued although the Company prefers the use of copper throughout the whole of the plumbing installations and the total avoidance of lead wherever possible."

In addition, the following details were given:

"Mainlaying.—This work on the Farley Hill Housing Estate has virtually been completed. Other small extensions of mains have been made as

requisite.

"New Sources.-Protracted negotiations with various authorities, notably Hertfordshire and Bedfordshire County Councils, have proceeded during the year for authority to develop a new source of supply at Friars Wash near Markyate. A draft Order was submitted to the Ministry of Health in September and a Public Inquiry was held on 17th January, 1951.

"Byelaws.-New Byelaws for the prevention of waste, undue consumption, misuse and contamination of water, based upon the Ministry of Health's latest model, were confirmed by the Ministry on 31st January, 1950, and came

into operation on the 1st March, 1950.

Class 4—Unsatisfactory

"Sampling of Water.—Weekly bacteriological examinations of all sources are carried out by the Public Health Laboratory Service and more detailed bacteriological and chemical examinations by the Public Analyst at monthly intervals.

Possible Sources of Pollution.—Careful consideration is being given to the suggested erection of a gasworks in the Dallow Road area, from the point of view of possible contamination to the Runley Wood Pumping Station source of supply. If it is quite impossible for an alternative site to be found, very special measures will have to be taken to obviate the possibility of contamination by chloro-phenols or cresols (taste producing) or thiocyan-

ides	(toxic)."	CIESO	is (taste	: produ	icing)	or tr	посу	an-

**Opinion** 

These three samples are in good condition and may be considered suitable for dietetic use.

Investigations of Water Sources other than Drinking Supplies

Twelve samples of water were taken from various sources in the course of public health investigations. They were submitted to the appropriate bodies for examination.

#### SEWERAGE AND SEWAGE DISPOSAL.

The drainage of the Borough is on the separate system, except in the

Stopsley area and the old part of the Borough where it is combined.

The soil water sewage is dealt with at the New Mill End Sewage Purification Works by sedimentation and bio-aeration. The sludge is treated with lime, dried and sold for manurial purposes. The effluent is discharged into the River Lea at New Mill End.

#### CLOSET ACCOMMODATION.

The following table shows the number of pail closets, chemical closets and cesspools in the Borough at the end of December, 1950:

Three cesspools were abolished, and two constructed during the year.

All pail closets are emptied either once or twice weekly between the

hours of 10 p.m. and 6 a.m.

Cesspools are emptied by means of mechanical plant as and when required. Five hundred and seventy-five emptyings were arranged during the twelve months ended 31st December, 1950.

# PUBLIC CLEANSING—REFUSE DISPOSAL.

The following information is supplied by the Director of Public Cleansing.

The system of refuse disposal is controlled tipping. The weight of house and trade refuse disposed of during the year was 40,729 tons, 3 cwt.,

2 qrs.

In spite of continuing shortages of labour (and the right kind of labour), there was a considerable improvement in the refuse collection service during the year, when a frequency of collection of seven days was maintained generally throughout the Borough.

AN EXHIBIT AT THE CLEAN FOOD EXHIBITION

## DISINFECTANT.

During the year 10 gallons of disinfecting fluid were supplied to the public, free of charge, for use in premises where cases of infectious disease, etc., had occurred.

#### LIBRARY BOOKS.

Eight hundred and twenty-five library books were withdrawn from circulation and were disinfected before they were returned.

# PUBLIC SWIMMING BATHS.

There are two Public Swimming Baths in the Borough, both owned by the Corporation.

The Public Baths are situated in Waller Street, Luton, and consist of a covered Swimming Pool, 46 Slipper Baths (35 for men and 11 for women), and one Russian Vapour Bath. The Open Air Pool situated off New Bedford Road, Luton, caters for swimming and bathing only.

During the season of 1950 the following number of bathers attended:

					IV/ - llon Ctood	Open Air
					Waller Street Baths	Swimming Pool
Swimming	Bath Total	• • •	• • •	• • •	70,683	70,041
Hot Baths	• • •	• • •	• • •	• • •	52,488	Nil
	Total	• • •	• • •	• • •	123,171	70,041
	1 Otal	• • •	• • •	• • •	120,171	70,041

Chloroscope examinations of the water are carried out by the attendants twice a day, and in addition, samples of the water are sent to the Public Analyst for examination each month. During the past year, reports have been very satisfactory.

## THEATRES.

Inspection of Sanitary Accommodation in the Cinemas and the Theatre has been made during the year.

Minor Sanitary defects were found and attended to.

# ERADICATION OF BED BUGS.

Sixty-four complaints of verminous premises were received during the year, and in all instances where bugs were found, disinfestation was carried out. The use of liquid vermicide containing DDT was relied upon for treating the infestations, and proved satisfactory. In six instances reinfestation occurred.

The following table shows the number of premises and rooms dealt with during 1950:

	Number o	f Premises	Number o	of Rooms
	Found to be infested	Disin- fested	Found to be infested	Disin- fested
Number of Council Houses  Number of other Houses  Number of cases where disinfestation has been carried out prior to removal from Clearance Areas, etc.	27 67	27 67	70 154	70 154
into new Council Houses  Number of cases where disinfestation has been carried out by Corporation				
Disinfecting Officer  Number of cases where disinfestation has been carried out by Occupants	93	93	223	223
or Contractors  Number of complaints of infestation	1	a 1	1	1
received (64)	64	64	159	159
Number of cases found by Sanitary Inspectors	30	30	65	65

# RATS AND MICE DESTRUCTION.

During the year the sewers received two maintenance treatments for rat infestation. The first treatment was completed in March, when 3,653 manholes were baited and 198 takes recorded. The second treatment was carried out in October, when 3,653 manholes were dealt with and 240 takes observed. It is reasonable to assume from these figures, as compared with last year, that a further reduction in the sewer infestation has occurred.

So far as dwellinghouses and business premises were concerned no noticeable decrease in infestation was observed. The proximity of rural areas no doubt accounted for a large number of re-infestations.

The Corporation Refuse Tip again received special treatment, and at no time during the year has the infestation been out of hand. In addition, other special treatment was given to certain of the larger works in the town.

An analysis of the work is detailed below:

			Co plai rece	nts	No. prem invo	nises	Treat cor ple	m-	i	ment n gress	Boo fou

# EXAMINATION OF MILK.

# SECTION 25, FOOD AND DRUGS ACT, 1938.

Twenty-seven samples of milk were taken and tested by guinea-pig inoculation and all samples were found to be free from tubercle bacilli.

In 6 samples there was serological evidence of Brucella abortus, and reports were sent to the County Medical Officer of Health concerned.

# BACTERIOLOGICAL EXAMINATION OF WASHED MILK BOTTLES, AND CHURNS.

Forty-two washed milk bottles were taken for examination during the year.

Twenty-nine were found to be "satisfactory" (not more than 600 bacteria per pint bottle); 7 were "fairly satisfactory" (more than 600 bacteria but less than 2,000 bacteria per pint bottle); and 6, with a count of more than 2,000 bacteria, were unsatisfactory.

In addition, 8 churn rinsings were taken for examination, 5 of which were satisfactory, 2 fairly satisfactory, and 1 unsatisfactory.

Where unsatisfactory bottles and churns were reported, the dairymen concerned were visited and advice given.

# FOOD HYGIENE.

During the year, the special attention devoted to restaurant kitchens, canteens and similar public eating places was continued. The work of requiring the installation or renewal of fittings in accordance with modern standards bore considerable success and the appended table gives adequate indication of its nature.

The practice of giving lectures to food handlers was continued with the use of visual aid equipment.

In conjunction with the Clean Food Exhibition held in June, special lectures were run expressly for the managers of food premises and for the personnel engaged in the preparation and distribution of food.

As an adjunct to the advice given in the use of detergents and sterilisers, experiments were carried out on the bactericidal efficiency of detergents. Samples of dishwashing water were taken for bacteriological examination.

#### ICE CREAM

Eighty-three samples of ice cream were examined by the Public Health

Laboratory Service.

Judging the samples of ice cream on the time taken to decolourise Methylene Blue and applying the Public Health Laboratory Service grading, the results of the examinations are shown below:

PUBLIC HEALTH LABORATORY SERVICE GRADING							
Grade 1	Grade 2	Grade 3	Grade 4				
43	16	19	5				

These results show a considerable improvement over the figures for the previous year and are consistent with an improved standard of hygiene in manufacture and handling.

Those falling in categories 3 and 4 were samples considered unsatisfactory, and necessitated further investigation either at the place of manufacture or at the premises from which the ice cream was sold.

In nine samples of the ice cream, faecal coli was reported present and further investigation was made and instruction given on the observance of hygienic principles.

No. of ice cream ingredients submitted for examination in course of supervision of manufacture ... ...

5

Forty-nine cattle were slaughtered outside the Borough as Foot and Mouth Disease contacts, but were inspected in the Luton slaughterhouses.

Eight meat specimens were taken in the course of meat inspection for bacteriological examination.

In conjunction with the Public Health Laboratory Service, an investigation was commenced towards the end of the year into the incidence of Salmonella and Brucella organisms in bovine spleens. Thirty-two specimens were taken which proved to be negative.

#### TUBERCULOSIS IN CALVES

During the year the Veterinary Inspector of the Ministry of Agriculture and Fisheries was notified of two calves examined in slaughterhouses and found to be affected with Tuberculosis.

The Divisional Veterinary Inspector reported that in one instance the calf had been sold by a dealer and it was not possible to trace the Dam. In the other, the cow was traced but examination failed to reveal evidence of Tuberculosis.

#### CYSTICERCUS BOVIS

The system of inspection to locate Cysticercus Bovis infestation in cattle was continued in all carcases during the year. Seven cases were diagnosed and the carcases were dealt with in accordance with approved policy.

In addition, the inspectors in the districts of origin were notified in an attempt to assist in the location of infected pastures.

4,166			184,132

The above statement includes the weight or the entire carcases and organs of 31 cattle, excluding cows, 53 cows, 19 calves, 18 sheep and lambs and 15 pigs.

Eleven food samples were examined bacteriologically in course of food inspection.

In addition, two samples of miscellaneous foods were submitted for examination in connection with an outbreak of suspected food poisoning. No infective organisms were found. During another investigation into a case of suspected food poisoning 18 swabs of nose, throat, ear and hand were taken from personnel engaged in the preparation of cooked meats.

# SAMPLING OF FOOD AND DRUGS.

During the year 349 samples were taken, 142 being formal and 207 informal samples.

Form	ial Informal	Nature of Sample		
	5	Butter		
	3	Meat and meat products		
<del>,</del>	28	Confectionery, sweets, etc.

8921	1	Milk	Extraneous Water 0.4%	Farmer informed. No further action.
8937	In- formal	Teaseed Oil	Mineral Oil 65%	Sale took place in Hertford- shire, but alleged to have
8938	In- formal	Teaseed Oil	Mineral Oil 40%	been consigned from Luton. Referred to Food and Drugs Inspector, Hertfordshire County Council, for formal sampling.

Other Proceedings under the Food and Drugs Act, 1938:

Two prosecutions were instituted under Section 3 of the Food and Drugs Act, 1938, for foreign bodies in cakes. The firm concerned was fined

£10, plus £1 1s. costs.

One prosecution was instituted under Section 9 of the Food and Drugs Act, 1938, for a foreign body in potato crisps, and four prosecutions under Section 13 of the Food and Drugs Act, 1938. In connection with these, the case was adjourned *sine die* with option to restore, because the defendant could not be found.

# HEALTH EDUCATION

During 1950 forty-nine lectures were given by members of the staff to audiences in the town totalling nearly eighteen hundred persons. The subjects of the lectures can be divided into the following groups:

Infant and Child	Care	• • •	16 L	ectures
Food Hygiene	• • •	• • •	25	23
Minor Ailments	• • •	• • •	3	22
Health Services	•••		5	

Many of the lectures were accompanied by visual aids of various kinds such as films and film strips, as well as practical demonstrations.

Examinations in Child Care were organised by two of the voluntary youth organisations in the town.

The exhibition of posters and distribution of leaflets, etc., was carried out as a routine measure throughout the year at welfare centres and day nurseries.

# THE CLEAN FOOD CAMPAIGN

A Clean Food Campaign was started in May to draw attention to the rising incidence in food poisoning and to enlist support for securing an improvement in the hygiene of food premises.

The Campaign opened with a delegate conference addressed by Dr. Robert Sutherland, Medical Adviser and Secretary of the Central Council for Health Education, at which 152 delegates attended representing 67 organisations. A report on the conference was sent to each delegate.

On June 3rd His Worship the Mayor opened a Clean Food Exhibition in the small Assembly Hall at the Town Hall. It was open daily from 2 p.m. to 9 p.m. until June 10th, and it is estimated that 4,500 people visited the exhibition. During the mornings parties of school children attended and were conducted round the exhibits by members of the Public Health Department staff. Film shows were given, each of approximately 45 minutes duration. Over 600 school children attended in parties of about 20 children.

The following films were shown throughout the exhibition:

- "Fly about the House."
- "The Good Housewife in her Kitchen."
- "One Man's Story."
- "Another Case of Poisoning."
- "The Milky Way."
- "Tracing the spread of infection."

The following special lectures were given during the week to invited audiences:

Monday, June 5th, 7.30 p.m.

Morley Parry, Esq.,

Food Hygiene Adviser to the Ministry of Food

Tuesday, June 6th, 7.30 p.m.

PROFESSOR ROBERT CRUICKSHANK,

M.D., F.R.C.P., D.P.H.,

St. Mary's Hospital Medical School

Friday, June 9th, 7.30 p.m.

Dr. Betty C. Hobbs,

Central Public Health Laboratory,

Colindale

- "Hygiene of Food Premises."

  To people directly engaged in the preparation and distribution of food.
- "Food Infections."

  To representatives of the staffs of local hospitals and the public health services.
- "Food Hygiene."
  To representatives of the managements of food premises.

In April the Borough Council adopted the Model Bye-Laws of the Ministry of Food and they became effective from July 10th, 1950.
